| US            | 20070035421 | A1 Layout rules for whitespace sensitive literals   | 20070215   | 341/51     |          |
| US            | 20070030276 | A1 Video and graphics system with parallel processing of graphics windows                             | 20070208   | 345/505    |          |
| US            | 20070024875 | A1 User terminal device, and a system and method for setting a borderless function                    | 20070201   | 358/1.2    |          |
| US            | 20070022384 | A1 Thematic response to a computer user's context, such as by a wearable personal computer            | 20070125   | 715/744    |          |
| US            | 20070058532 | A1 Graphical verification tool for packet-based interconnect bus                                      | 20070104   | 710/100    |          |
| US            | 20060290708 | A1 Graphics display system with anti-flutter filtering and vertical scaling feature                   | 20061228   | 345/592    |          |
| US            | 20060288301 | A1 Automatic user interface generation  | 20061221   | 715/762    |          |
| US            | 20060288286 | A1 User interfaces for collaborative multi-locale context-aware systems management problem and method | 20061130   | 345/629    |          |
| US            | 20060268012 | A1 Video, audio and graphics decode, composite and display system                                     | 20061116   | 703/12     |          |
| US            | 20060259289 | A1 Method and system for specifying and developing application systems with dynamic behavior          | 20060928   | 716/4      |          |
| US            | 20060218512 | A1 System and method for rapid prototyping ofasic systems   | 20060921   | 717/113    |          |
| US            | 20060212845 | A1 Bi-directional programming system/method for program development                                   | 20060824   | 700/86     |          |
| US            | 20060190105 | A1 Merging graphical programs   | 20060824   | 340/572.4  |          |
| US            | 20060187048 | A1 Method and system for agricultural data collection and management                                  | 20060720   | 717/107    |          |
| US            | 20060161888 | A1 Code generation  | 20060629   | 703/22     |          |
| US            | 20060142989 | A1 Method and apparatus for pattern based generation of graphical user interfaces (GUI)               | 20060525   | 719/318    |          |
| US            | 2006012399  | A1 Automated binding for object oriented programming user interface components                        | 20060518   | 715/513    |          |
| US            | 20060107199 | A1 Image stitching methods and systems  | 20060518   | 345/629    |          |
| US            | 20060103673 | A1 Vector path merging into gradient elements   |            |            |          |

|                   |   |                     |
|-------------------|---|---------------------|
| US 20060101068 A1 | Layout information for data component   | 20060511 707/103R   |
| US 20060058909 A1 | System and method for on-machine probing  | 20060316 700/195    |
| US 20060038743 A1 | System and method for displaying projector system identification information                    | 20060223 345/9      |
| US 2006004680 A1  | Contextual responses based on automated learning techniques                                     | 20060105 706/12     |
| US 20050283758 A1 | Bi-directional programming system/method for program development                                | 20051222 717/113    |
| US 20050278740 A1 | Technique for delivering via a communications network data for image display with a desired     | 20051215 725/41     |
| US 20050270236 A1 | System and methods for determining the location dynamics of a portable computing device         | 20051208 342/451    |
| US 20050248790 A1 | Method and apparatus for interleaving parts of a document                                       | 20051110 358/1.12   |
| US 20050231526 A1 | Graphics display system with anti-aliased text and graphics feature                             | 20051020 345/592    |
| US 20050203876 A1 | Heterogeneous multi-level extendable indexing for general purpose annotation systems            | 20050915 707/3      |
| US 20050197809 A1 | System and method for optimizing optical and digital system designs                             | 20050908 703/6      |
| US 20050192092 A1 | Decoupling of the graphical presentation of a game from the presentation logic                  | 20050901 463/31     |
| US 20050182709 A1 | Automated financial scenario modeling and analysis tool having an intelligent graphical user i  | 20050818 705/38     |
| US 20050168480 A1 | Graphics display system with anti-flutter filtering and vertical and horizontal scaling feature | 20050804 345/592    |
| US 20050160398 A1 | Method and apparatus for dataflow creation and execution  | 20050721 717/104    |
| US 20050150192 A1 | Cushioning conversion system and method   | 20050714 53/472     |
| US 20050131783 A1 | System, method, and computer program product for network-based part management system           | 20050616 705/34     |
| US 20050122341 A1 | Video and graphics system with parallel processing of graphics windows                          | 20050609 345/558    |
| US 20050122335 A1 | Video, audio and graphics decode, composite and display system                                  | 20050609 345/520    |
| US 20050122336 A1 | Component data managing method  | 20050519 707/3      |
| US 20050108215 A1 | Automated derivative view rendering system  | 20050519 84/609     |
| US 20050103188 A1 | PLM-supportive CAD-CAM tool for interoperative electrical & mechanical design for hardware      | 20050428 717/128    |
| US 20050091644 A1 | System and method for using data address sequences of a program in a software development       | 20050414 700/97     |
| US 20050080502 A1 | Browser-based editor for dynamically generated data   | 20050407 717/113    |
| US 20050076330 A1 | Configuring a GUI element to publish and/or subscribe to data                                   | 20050324 715/733    |
| US 20050060205 A1 | Systems and methods for a graphical input display in an insurance processing system             | 20050317 705/4      |
| US 20050060184 A1 | Graphical input display in an insurance processing system                                       | 20050317 705/2      |
| US 20050024369 A1 | Video and graphics system with a single-port RAM  | 20050203 345/547    |
| US 20050012911 A1 | System and method for displaying projector system identification information                    | 20050120 353/122    |
| US 20050012759 A1 | Video and graphics system with an MPEG video decoder for concurrent multi-row decoding          | 20050110 345/629    |
| US 20050005261 A1 | Component integration engine  | 20050106 717/108    |
| US 20040268228 A1 | Framework for creating modular web applications   | 20041230 715/505    |
| US 20040263388 A1 | Systems and methods for determining the location dynamics of a portable computing device        | 20041230 342/451    |
| US 20040262277 A1 | Airfoil qualification system and method   | 20041230 219/121.85 |
| US 20040249258 A1 | System and method for extracting physiological data using ultra-wideband radar and improve      | 20041209 600/1407   |
| US 20040249257 A1 | Article of manufacture for extracting physiological data using ultra-wideband radar and improve | 20041209 600/1407   |
| US 20040246257 A1 | Graphics accelerator  | 20041209 345/503    |
| US 20040221260 A1 | Systems and methods for defining a simulated interactive web page                               | 20041104 717/104    |
| US 20040218902 A1 | Image processing apparatus, image processing method, and recording medium                       | 20041104 386/52     |
| US 20040215603 A1 | Grid data processing systems and methods  | 20041028 707/3      |
| US 20040215494 A1 | Method and system for determining monetary amounts in an insurance processing system            | 20041028 705/4      |
| US 20040212734 A1 | Graphics display system with video synchronization feature                                      | 20041028 348/536    |
| US 20040212730 A1 | Video and graphics system with video scaling  | 20041028 348/441    |
| US 20040209344 A1 | Crystal structure of angiotensin-converting enzyme-related carboxypeptidase                     | 20041021 435/226    |
| US 20040208245 A1 | Video and graphics system with video scaling  | 20041021 375/240.15 |
| US 20040207644 A1 | Graphics display system with anti-flutter filtering and vertical scaling feature                | 20041021 345/629    |
| US 20040177191 A1 | Graphics display system with unified memory architecture  | 20040909 710/240    |
| US 20040177190 A1 | Graphics display system with unified memory architecture  | 20040909 710/240    |

|                   |  |                    |
|-------------------|--|--------------------|
| US 20040169660 A1 | Graphics display system with color look-up table loading mechanism   | 20040902 345/601   |
| US 20040165100 A1 | Method of automatically adjusting exposure in a shutterless digital camera                                       | 20040826 348/362   |
| US 20040160445 A1 | System and method of converting frame-based animations into interpolator-based animations                        | 20040819 345/473   |
| US 20040153873 A1 | Method and system for real-time tamper evidence gathering for software   | 20040805 714/47    |
| US 20040150652 A1 | Graphics display system with window descriptors  | 20040805 345/589   |
| US 20040139018 A1 | Card system  | 20040715 705/41    |
| US 20040130558 A1 | Apparatus and method for blending graphics and video surfaces  | 20040708 345/629   |
| US 20040139141 A1 | Systems and methods for creating, modifying, interacting with and playing musical compositio                     | 20040513 84/609    |
| US 20040089199 A1 | Method of forming a business rule  | 20040506 705/4     |
| US 20040088197 A1 | Method of modifying a business rule while tracking the modifications   | 20040506 705/4     |
| US 20040088196 A1 | Methodical display of a business rule  | 20040408 348/188   |
| US 20040088195 A1 | Method of modifying a business rule  | 20040401 705/1     |
| US 20040088198 A1 | Method of generating a graphical display of a business rule and associated business rule ele                     | 20040325 717/115   |
| US 20040088197 A1 | Method of generating a graphical display of a business rule with a translation                                   | 20040325 715/762   |
| US 20040088196 A1 | Method of modifying a business rule  | 20040325 345/660   |
| US 20040088195 A1 | Method of measuring data for calibration, program for measuring data for calibrat                                | 20040325 345/531   |
| US 20040066454 A1 | Device and method of measuring data for electronically processing government sponsored benefits                  | 20040212 717/107   |
| US 20040064332 A1 | Systems and methods for dataflow creation and execution  | 20040129 715/781   |
| US 20040056908 A1 | Method and system for dataflow creation and execution  | 20040101 707/1     |
| US 20040056874 A1 | Graphics display system with video scaler  | 20031204 700/96    |
| US 20040056864 A1 | Video and graphics system with MPEG specific data transfer commands  | 20031204 700/1     |
| US 20040031015 A1 | System and method for manipulation of software   | 20031127 700/97    |
| US 20040017398 A1 | Graphics display system with graphics window control mechanism   | 20031120 707/4     |
| US 20040002960 A1 | Methods and apparatus for process, factory-floor, environmental, computer aided manufactur                       | 20031120 707/4     |
| US 20030225469 A1 | Methods and apparatus for process, factory-floor, environmental, computer aided manufactur                       | 20031106 707/100   |
| US 20030225462 A1 | Component object model communication method for process, factory-floor, environmental, computer aided manufactur | 20031106 345/560   |
| US 20030220707 A1 | Workflow control configurator for use with process, factory-floor, environmental, computer aid                   | 20031009 345/505   |
| US 20030217054 A1 | Methods and apparatus for process, factory-floor, environmental, computer aided manufactur                       | 20030403 463/30    |
| US 20030217053 A1 | Context control mechanism for data executed in workflows of process, factory-floor, environm                     | 20030403 463/30    |
| US 20030208493 A1 | Object relational database management system   | 20030918 705/1     |
| US 20030206174 A1 | Graphics display system with line buffer control scheme  | 20030821 717/116   |
| US 20030189571 A1 | Video and graphics system with parallel processing of graphics windows   | 20030626 345/547   |
| US 20030177025 A1 | Method and system for agricultural data collection and management  | 20030529 702/19    |
| US 20030169765 A1 | Method of configuring at least one user-specific connection between access points to a trans                     | 20030501 709/220   |
| US 20030159129 A1 | Component model for real time system control   | 20030501 702/19    |
| US 20030158987 A1 | Graphics display system with unified memory architecture   | 20030417 707/10    |
| US 20030117406 A1 | Graphics accelerator   | 20030403 463/30    |
| US 20030109988 A2 | SYSTEMS AND METHODS FOR MONITORING BEHAVIOR INFORMATICS  | 20030220 709/217   |

## 1 [Education: Environments for creativity: a lab for making things](#)

Ellen Yi-Luen Do, Mark D. Gross

**June 2007 Proceedings of the 6th ACM SIGCHI conference on Creativity & cognition**
**C&C '07**
**Publisher:** ACM Press

 Full text available: [pdf\(2.28 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We have, with our students, engaged in cross-disciplinary research in design. We describe parameters and principles that we have found helpful in organizing and conducting this kind of work. A variety of projects that have been developed in our group illustrate these parameters and principles. Our group focuses on making and we have come to see creativity as grounded in the ability to make things.

## 2 [Teaching graphics using Ada](#)

C. Wayne Brown

**November 2004 ACM SIGAda Ada Letters , Proceedings of the 2004 annual ACM SIGAda international conference on Ada: The engineering of correct and reliable software for real-time & distributed systems using Ada and related technologies SIGAda '04**, Volume XXIV Issue 4

**Publisher:** ACM Press

 Full text available: [pdf\(177.42 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#), [review](#)

This paper describes several tools related to the Ada language that were developed to support the teaching of a computer graphics course. These tools include an updated and improved OpenGL Ada specification file, a VRML-to-code conversion tool, and an Ada-to-C conversion tool. The rational for the development of these tools and some issues related to their implementation are discussed.

**Keywords:** Ada, C, VRML, code conversion, computer graphics, cross compiling

### 3 Real-time volume graphics

 Klaus Engel, Markus Hadwiger, Joe M. Kniss, Aaron E. Lefohn, Christof Rezk Salama, Daniel Weiskopf

August 2004 **ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04**

**Publisher:** ACM Press

Full text available:  [pdf\(7.63 MB\)](#) Additional Information: [full citation](#), [abstract](#)

The tremendous evolution of programmable graphics hardware has made high-quality real-time volume graphics a reality. In addition to the traditional application of rendering volume data in scientific visualization, the interest in applying these techniques for real-time rendering of atmospheric phenomena and participating media such as fire, smoke, and clouds is growing rapidly. This course covers both applications in scientific visualization, e.g., medical volume data, and real-time rendering, ...

### 4 GPGPU: general purpose computation on graphics hardware

 David Luebke, Mark Harris, Jens Krüger, Tim Purcell, Naga Govindaraju, Ian Buck, Cliff Woolley, Aaron Lefohn

August 2004 **ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04**

**Publisher:** ACM Press

Full text available:  [pdf\(63.03 MB\)](#) Additional Information: [full citation](#), [abstract](#), [citations](#)

The graphics processor (GPU) on today's commodity video cards has evolved into an extremely powerful and flexible processor. The latest graphics architectures provide tremendous memory bandwidth and computational horsepower, with fully programmable vertex and pixel processing units that support vector operations up to full IEEE floating point precision. High level languages have emerged for graphics hardware, making this computational power accessible. Architecturally, GPUs are highly parallel s ...

### 5 Advances in dataflow programming languages

 Wesley M. Johnston, J. R. Paul Hanna, Richard J. Millar  
March 2004 **ACM Computing Surveys (CSUR)**, Volume 36 Issue 1

**Publisher:** ACM Press

Full text available:  [pdf\(835.52 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Many developments have taken place within dataflow programming languages in the past decade. In particular, there has been a great deal of activity and advancement in the field of dataflow visual programming languages. The motivation for this article is to review the content of these recent developments and how they came about. It is supported by an initial review of dataflow programming in the 1970s and 1980s that led to current topics of research. It then discusses how dataflow programming evo ...

## 7 Java resources for computer science instruction

 Joseph Bergin, Thomas L. Naps, Constance G. Bland, Stephen J. Hartley, Mark A. Holliday, Pamela B. Lawhead, John Lewis, Myles F. McNally, Christopher H. Nevison, Cheng Ng, George J. Pothering, Tommi Teräsvirta  
December 1998 **ACM SIGCSE Bulletin**, Volume 30 Issue 4

**Publisher:** ACM Press

Full text available:  pdf(2.29 MB) Additional Information: [full citation](#), [abstract](#), [citations](#), [index terms](#)

The goal of this working group was to collect, evaluate, and foster the development of resources to serve as components of both new and revised traditional courses that emphasize object-oriented software development using Java. These courses could, for example, integrate Internet-based distributed programming, concurrency, database programming, graphics and visualization, human interface design and object-oriented development. They could therefore also be suitable as capstone courses in computer ...

## 9 A database design for graphical models

 Susi Dulli, Vitaliano Milanese  
December 1990 **ACM SIGPLAN Notices**, Volume 25 Issue 12

**Publisher:** ACM Press

Full text available:  pdf(419.52 KB) Additional Information: [full citation](#), [abstract](#), [index terms](#)

In this paper we present an engineering data management system, that is a database which is supposed to store and support the manipulation of data about solid geometry objects. Some technical aspects are particularly addressed, which are related to the modeling environment, system architecture and data manipulation language.

## 10 The UCLA Brain Research Institute data processing laboratory

 T. Estrin  
December 1987 **Proceedings of ACM conference on History of medical informatics**

**Publisher:** ACM Press

Full text available:  pdf(1.09 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The Brain Research Institute is an interdisciplinary research unit of the UCLA Medical School, supporting basic research in fields which contribute to an understanding of brain mechanisms and behavior. In 1960 the School of Medicine was relatively young, having graduated its first class in 1955. Among the early professors to affiliate with the new medical school was Dr. H. W. Magoun, whose own research interests were in the nervous system. Under his leadership, a formal proposal was prepared ...

11 Complex logarithmic mapping and the focus of expansion (abstract only)

Ramesh Jain  
January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available: [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

Complex logarithmic mapping has been shown to be useful for the size, rotation, and projection invariance of objects in a visual field for an observer translating in the direction of its gaze. Assuming known translational motion of the observer, the ego-motion polar transform was successfully used in segmentation of dynamic scenes. By combining the two transforms one can exploit features of both transforms and remove some of the limitations which restrict the applicability of both. In this paper ...

12 Tracking three dimensional moving light displays (abstract only)

Michael Jenkin  
January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available: [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

A method is presented for tracking the three-dimensional motion of points from their changing two-dimensional perspective images as viewed by a nonconvergent binocular vision system. The algorithm relies on a general smoothness assumption to guide the tracking process, and application of the tracking algorithm to a three-dimensional moving light display based on Cutting's Walker program as well as other domains are discussed. Evidence is presented relating the tracking algorithm to certain belief ...

13 Adapting optical-flow to measure object motion in reflectance and x-ray image sequences (abstract only)

Nancy Cornelius, Takeo Kanade  
January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available: [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

This paper adapts Horn and Schunck's work on optical flow to the problem of determining arbitrary motions of objects from 2-dimensional image sequences. The method allows for gradual changes in the way an object appears in the image sequence, and allows for flow discontinuities at object boundaries. We find velocity fields that give estimates of the velocities of objects in the image plane. These velocities are computed from a series of images using information about the spatial and temporal bri ...

14 Determining motion parameters for scenes with translation and rotation (abstract only)

Charles Jerian, Ramesh Jain  
January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available: [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

A study of methods that determine the rotation parameters of a camera moving through synthetic and real scenes is conducted. Algorithms that combine ideas of Jain and Prazdny are developed to find translational and rotational parameters. An argument is made for using hypothesized motion parameters rather than relaxation labelling to find correspondence.

15

Determining 3-D motion parameters of a rigid body: a vector-geometrical approach

 **(abstract only)**

B. L. Yen, T. S. Huang  
January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

A vector-geometrical approach is given for the determination of 3-D motion parameters of a rigid body from point correspondences over 2 time sequential images. The resulting algorithms are similar to existing methods. However, the geometrical interpretations provide much valuable insight into the nature of the problem and the uniqueness question.

**16 A hybrid approach to structure-from-motion (abstract only)** 

 Aaron Bobick  
January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

A method is presented for computing structure from the motion of rigid objects which are rotating about a fixed axis. The input consists of two discrete frames containing the positions and instantaneous direction vectors of three points in orthographic projection. Because only the direction of the velocity vectors and not their magnitudes is needed, the method is insensitive to errors in velocity magnitude estimation. This type of computation could be important in recovering the 3-dimensional st ...

**17 Determining the instantaneous axis of translation from optic flow generated by arbitrary sensor motion (abstract only)** 

 J. H. Rieger, D. T. Lawton  
January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

This paper develops a simple and robust procedure for determining the instantaneous axis of translation from image sequences induced by unconstrained sensor motion. The procedure is based upon the fact that difference vectors at discontinuities in optic flow fields generated by sensor motion relative to a stationary environment are oriented along translational field lines. This is developed into a procedure consisting of three steps: 1) locally computing difference vectors from an optic flow fie ...

**18 Real and apparent motion: one mechanism or two? (abstract only)** 

 Marc Green, Michael von Grunau  
January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

Two direction selective adaptation experiments were conducted to investigate whether real and apparent motion are processed by a single visual mechanism. Previous studies with real motion have shown that adaptation to a grating drifting in one direction has an effect on perceived motion of subsequently viewed test gratings (the velocity aftereffect) and also selectively raises contrast threshold (direction-specific threshold elevation). We conducted analogous experiments in which observers adapt ...

**19 Selective attention to aspects of motion configurations: common vs. relative motion (abstract only)** 

 James R. Pomerantz, Nelson Toth  
January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

The motion of a dot configuration may be described as the sum of its relative (part) and common (whole) motion components. Is either of these two component dimensions extracted before the other in human perception? Reaction time data from selective attention experiments show that neither dimension can be responded to without interference from the other, implying that neither is processed more quickly than or ahead of the other. Following Garner's nomenclature, common and relative motions appear ...

**20** [The perception of coherent motion in two-dimensional patterns \(abstract only\)](#) 

 Edward H. Adelson, J. Anthony Movshon  
January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

When one looks at a two-dimensional scene of moving objects, one can usually assign a velocity to each point in that scene with little effort. This suggests that some early visual processes are able to generate a two-dimensional velocity map using fast parallel computations. But it is not obvious how this should be done, and we are currently trying to understand how the human visual system does it.

### 21 [Coherent global motion percepts from stochastic local motions \(abstract only\)](#)

D. W. Williams, R. Sekuler  
 January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available: [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

A percept of global, coherent motion results when many different localized motion vectors are combined. We studied the percept with dynamic random dot kinematograms in which each element took an independent, random walk of constant step size. Directions of displacement from frame to frame were chosen from a uniform distribution. The tendency to see coherent, global flow along the mean of the uniform distribution varied with the range of the distribution. Psychometric functions were obtained with ...

### 22 [Perception of rotation in depth: the psychophysical evidence \(abstract only\)](#)

Myron L. Braunstein  
 January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available: [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

There are a variety of ways in which motion in the environment can provide information about three-dimensional relationships. One transformation that has received increasing attention in both the visual perception literature and in the machine vision literature is rotation in depth. This transformation, which includes any rigid rotation other than a rotation about the line of sight, can provide both a strong impression of depth and specific information about three-dimensional relationships in a ...

### 23 [Knowledge-based animation \(abstract only\)](#)

David Zeltzer  
 January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available: [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

In constructing a goal-directed system for automatic motion synthesis for computer animation, the essential problem is to account for the extraordinary flexibility and adaptability exhibited by moving creatures. The selective *potentiation* and *depotentiation* of elements of a hierarchy of motor control programs is a key to the generation of

adaptive motor control. The constraints on motion sequences are analyzed, and mechanisms for achieving continuity of movements are discussed. The ...

**24 Computing the velocity field along contours (abstract only)**

 Ellen C. Hildreth

January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  pdf(3.92 MB) Additional Information: [full citation](#), [abstract](#)

In this paper, we present a computational study of the measurement of motion. Similar to other visual processes, the motion of elements is not determined uniquely by information in the changing image; additional constraint is required to compute a unique velocity field. Given this global ambiguity of motion, local measurements from the changing image cannot possibly specify a unique local velocity vector, and in fact, may only specify one component of velocity. Computation of the full two-dimens ...

**25 3D balance in legged locomotion: modeling and simulation for the one-legged case**

 (abstract only)

Seshashayee S. Murthy, Marc H. Raibert

January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  pdf(3.92 MB) Additional Information: [full citation](#), [abstract](#)

This paper explores the notion that the motion of dynamically stable 3D legged systems can be decomposed into a planar part that accounts for large leg and body motions that provide locomotion, and an extra-planar part that accounts for subtle corrective motions that maintain planarity. The large planar motions raise and lower the legs to achieve stepping, and they propel the system forward. The extra-planar motions ensure that the legged system remains in the plane. A solution of this form is s ...

**26 Representing and reasoning about change (abstract only)**

 Reid G. Simmons, Randall Davis

January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  pdf(3.92 MB) Additional Information: [full citation](#), [abstract](#)

A recent trend in artificial intelligence research is the construction of expert systems capable of reasoning from a detailed model of the objects in their domain and the processes that affect those objects. We describe a system being built in this fashion, designed to solve a class of problems known as geologic interpretation: given a cross-section of the Earth's crust (showing formations, faults, intrusions, etc.), hypothesize a sequence of geologic events whose occurrence could have formed th ...

**27 On the estimation of dense displacement vector fields from image sequences**

 (abstract only)

H. H. Nagel

January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  pdf(3.92 MB) Additional Information: [full citation](#), [abstract](#)

Based on recent experimental as well as theoretical investigations, a generalization of previously published approaches towards the estimation of displacement vector fields is formulated. The calculus of variation allows to transform this approach into a set of two partial differential equations for the two components of the displacement vector field. Some simplifying assumptions facilitate the derivation of an iterative solution approach which can be studied in closed form.

**28 Multicomputer architectures for real-time perception (abstract only)**

 Leonard Uhr

January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  pdf(3.92 MB) Additional Information: [full citation](#), [abstract](#)

This paper examines the computing demands that must be met by a system capable of scene description and perception of real-world moving objects. A brief survey is made of the major different kinds of computer systems that have been built, or designed, and of the different sources of potential speed-up of processing that have been exploited. Finally, a number of alternative possible hardware architectures that might be capable of handling real-time perception of moving objects are suggested, and ...

**29 A multiple track animator system for motion synchronization (abstract only)**

 D. Fortin, J. F. Lamy, D. Thalmann

January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  pdf(3.92 MB) Additional Information: [full citation](#), [abstract](#)

MUTAN (MULTiple Track ANimator) is an interactive system for independently animating three-dimensional graphical objects. MUTAN can synchronize different motions; it is also a good tool for synchronizing motion with sound, music, light or smell. To indicate moments in time, marks are associated with appropriate frame numbers. MUTAN enables the marks to be manipulated. An animator can also adjust one motion without modifying the others. To make this possible, MUTAN handles several tracks at a time ...

**30 Motion analysis of grammatical processes in a visual-gestural language (abstract only)**

Howard Poizner, Edward S. Klima, Ursula Bellugi, Robert B. Livingston

January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  pdf(3.92 MB) Additional Information: [full citation](#), [abstract](#)

Movement of the hands and arms through space is an essential element both in the lexical structure of American Sign Language (ASL), and, most strikingly, in the grammatical structure of ASL: it is in patterned changes of the movement of signs that many grammatical attributes are represented. These grammatical attributes occur as an isolable superimposed layer of structure, as demonstrated by the accurate identification by deaf signers of these attributes presented only as dynamic point-light dis ...

**31 The cross-ratio and the perception of motion and structure (abstract only)**

 William A. Simpson

January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available:  pdf(3.92 MB) Additional Information: [full citation](#), [abstract](#)

Followers of J. J. Gibson have proposed that the cross-ratio, a projective invariant for four collinear points, underlies the perception of objects in motion. Experiment 1 tested this theory by presenting subjects with displays of 3 or 4 dots rotating in depth. Accuracy was equally high in both conditions for motion and structure judgements, so the cross-ratio cannot be necessary. Experiments 2 and 3 tested the cue of lining up, and some evidence for its use was found. The results are consistent ...

**32 Perceiving and recovering structure from events (abstract only)**

James E. Cutting

January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available: [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

How do perceivers identify a moving object as seen against a changing background? How do figure and ground separate? Such questions have engaged psychologists for at least seventy years. In particular, the Gestalt psychologists were deeply concerned with the latter, but had only the illdefined notion of *common fate*, or uniform density, for dealing with the former. The coherent flow of a moving object is seen, somehow, by extracting those aspects of the whole that segregate it from the gro ...

33 ["Graphical marionette" \(abstract only\)](#)

Carol M. Ginsberg, Delle Maxwell

January 1984 **ACM SIGGRAPH Computer Graphics**, Volume 18 Issue 1

**Publisher:** ACM Press

Full text available: [pdf\(3.92 MB\)](#) Additional Information: [full citation](#), [abstract](#)

Many person-modelling 3-D animation systems are currently being developed, but often suffer from confusing and elaborate user interfaces. Given over 200 degrees of freedom, the human form is capable of such intricate motion that its specification and display presents considerable difficulty to both animators and animation systems designers. Given such difficulties with single figures, the orchestration of several in parallel remains a major challenge. In pursuit of understanding thoroughly this ...

## Nothing Found

Your search for **+"graphical modeling" +"converting component" +reference** did not return any results.

You may want to try an [Advanced Search](#) for additional options.

Please review the [Quick Tips](#) below or for more information see the [Search Tips](#).

### Quick Tips

- Enter your search terms in lower case with a space between the terms.

sales offices

You can also enter a full question or concept in plain language.

Where are the sales offices?

- Capitalize proper nouns to search for specific people, places, or products.

John Colter, Netscape Navigator

- Enclose a phrase in double quotes to search for that exact phrase.

"museum of natural history" "museum of modern art"

- Narrow your searches by using a **+** if a search term must appear on a page.

museum +art

- Exclude pages by using a **-** if a search term must not appear on a page.

museum -Paris

Combine these techniques to create a specific search query. The better your description of the information you want, the more relevant your results will be.

1 [Toolkits: The MaggLite post-WIMP toolkit: draw it, connect it and run it](#)

 Stéphane Huot, Cédric Dumas, Pierre Dragicevic, Jean-Daniel Fekete, Gérard Héron  
October 2004 **Proceedings of the 17th annual ACM symposium on User interface software and technology UIST '04**

**Publisher:** ACM Press

 Full text available:  [pdf\(10.39 MB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This article presents MaggLite, a toolkit and sketch-based interface builder allowing fast and interactive design of post-WIMP user interfaces. MaggLite improves design of advanced UIs thanks to its novel *<i>mixed-graph</i>* architecture that dynamically combines scene-graphs with interaction-graphs. *<i>Scene-graphs</i>* provide mechanisms to describe and produce rich graphical effects, whereas *<i>interaction-graphs</i>* allow expressive and fine-grained description of ad ...
